

Black Cube

Key selling points & how to differentiate it from other products

The **Black Cube** combines Nordic craftsmanship with thoughtful design – a contemporary outdoor sauna built for those who value both aesthetics and performance. Every detail, from its shingled roof to the black-tinted glass and spacious L-shaped benches, is designed to elevate the sauna experience. Durable materials, intelligent ventilation, and refined finishing touches make the Black Cube not just a product, but a statement of comfort and quality.

Key Differentiators of the Black Cube Sauna

If compared to other cube-style outdoor saunas on the market, the **Black Cube** stands out through a number of thoughtful design and construction details that enhance both comfort and longevity:

1. **Premium Roof Finish** – The Black Cube features a high-quality **shingle roof** finish that provides excellent durability and a refined look.
2. **L-Shaped Upper Bench** – Inside, both the **upper and lower benches** follow an L-shaped layout, offering more seating comfort and flexibility than typical straight-bench designs.
3. **Bench Skirt Included** – A **bench skirt** conceals the space beneath the seating, giving the interior a more complete and premium appearance.
4. **Wider Benches for Reclining** – The Black Cube's **bench width is 60 cm (≈ 23.6 in)**, compared to the more common **45 cm (≈ 17.7 in)** width. This allows users to comfortably **lie down** during the sauna session.
5. **Private Black-Tinted Glass** – The **black tempered glass** front ensures privacy from the outside while maintaining a sleek, modern aesthetic.
6. **More Spacious Design** – The Black Cube is approximately **around 10 % larger internally**, providing noticeably more room to relax.
7. **Optimized Heater Placement** – The **side-mounted heater** opens up the front view from inside, creating a more spacious and scenic feeling.
8. **Thicker Back Wall** – The back wall is made from **40 mm thermo-pine**, roughly **43 % thicker** than the more typical **28 mm** wall structure – improving both insulation and durability.
9. **Optional Half-Panoramic Window** – For those who want extra light and visibility, the Black Cube offers a **half-panoramic side window upgrade**.
10. **Superior Ventilation System** – An **intake vent under the heater** and **exhaust vent behind the benches at foot level** ensure efficient airflow, warmer feet, and a consistently fresh oxygen supply.

11. **Nerostep Floor Grid Mat Included** – A **non-slip Nerostep mat** is included as standard, improving safety and comfort underfoot.
12. **Metal Roof Gutters** – The roof is finished with metal **rain gutters**, adding a refined, functional detail that helps direct water runoff and enhances durability.
13. **Exterior Paint and Interior Protection Kit Included** - The Black Cube comes with a **complete finishing set**: the **feet, side arches, and door & window frame** are **pre-colored** at the factory, while **exterior paint for the sauna** is supplied in a can for **on-site application** after assembly. In addition, the set includes **interior floor varnish** and **joint-sealing lacquer** to ensure long-term **water resistance and durability**. This guarantees that every unit can be finished to a professional, weatherproof standard.
