DESCRIPTION

The Homecraft APEX 12 kW Electric Sauna Heater is a high-capacity electric heater engineered for larger residential and light-commercial sauna rooms. Designed to efficiently heat bigger spaces with fast warm-up times and steady, even temperatures, this unit delivers strong, consistent performance for both traditional dry heat and steam sessions.

Built in Canada using heavy-duty materials, the APEX series is designed for frequent use and long-term reliability. Its optimized airflow system promotes even heat distribution while protecting internal components for extended heater life.

This model supports dual-voltage installation (240V or 208V) and pairs with Homecraft high-capacity digital controls (sold separately). Depending on voltage, it requires either TKE3, TKE2-3, or TKE24D (24-hour timer) controls, offering flexible control solutions for residential or commercial environments.
