Product Code Update

Information for partners — what changes on our product codes and labels, and what it means for your ordering.

1 · What is changing, and why

HUUM is moving to a new ERP system. Our product codes had grown without a single logic, and in places the same number meant different things in different markets. They are replaced by one consistent structure.

The products themselves do not change. Only the codes, and the barcode printed on the label, are new.

2 · How to read a product code

H	1	001	01	EU
HUUM	type	product	variation	market
	1 = heater	001 = DROP	01 = 4.5 kW	European Union

H100101EU = DROP 4.5 kW, European Union version

Prefix	Product group	Prefix	Product group
H1	Sauna heaters	H4	HUUM SPA products
H2	Control units (UKU, panels)	SP	Spare parts
H3	Accessories		

3 · One number connects the whole range

Each product has a three-digit number. DROP is 001, and it reappears in everything related to DROP — only the prefix changes.

DROP = **001**

HEATER	ACCESSORY	SPARE PART
H1 001 01 EU	H3 001 01	SP 1001 01 EU

4 · Market suffixes

A market suffix appears only where the product genuinely differs — certification, electrical specification or documentation language. Heaters and control units carry one; accessories and HUUM SPA products are the same worldwide and carry none.

Product group	Suffix	Example
Heaters (H1)	yes	H100101EU
Control units (H2)	yes	H200101EU
Accessories (H3)	no — sold worldwide	H300101
HUUM SPA (H4)	no — sold worldwide	H400501
Spare parts (SP)	only if the part differs	SP100101EU · SP100003

- **Market suffixes:** for example EU European Union, US USA, JP Japan etc.
- **The code identifies the market.** Where a product is market-specific, the suffix in the code tells you which version it is.

5 · What is on the label

The label carries one barcode, encoding the product code (SKU). Both the SKU and — on sold products — the EAN are also printed as numbers.

	BEFORE	NOW
SOLD PRODUCTS	EAN-13 · 4744103010622	*Code 128 — encodes the SKU* SKU **H100101EU** EAN **4744103010622**
SPARE PARTS	EAN-13 · on some parts	*Code 128 — encodes the SKU* SKU **SP100101EU** *no EAN — on any spare part*

6 · Why spare parts no longer carry an EAN

- **An EAN is a retail trade identifier.** It is issued by GS1 as a paid, limited resource, required by retail and marketplace systems.
- **A spare part is a component of a product that already has one.** Spare parts are supplied directly and through the service network, not through retail.
- **Spare parts carry no EAN at all.** Not now and not in future — a spare part is identified only by its code.
- **Nothing changes for scanning or stock.** The part is identified by its code, which the label barcode encodes.

7 · What this means for you

- **Ordering.** Use the new codes from the updated price list. Old-to-new mapping available on request.
- **Scanning.** Code 128 is read by virtually all handheld scanners; EAN-only scanners may need it enabled once.
- **Spare parts.** Order by code.

A code is never reused for a different product. If a product is withdrawn, its code is retired.
